Experience

Associate Product Developer - Epicor Software, Bengaluru Sep 2026 - Present

- Re-tested 5 penetration testing defect tickets with Burp Suite and manual API manipulation to validate remediation; identified 3 incomplete fixes (CSP unsafe-inline bypass, BOLA user-data extraction, JWT post-logout invalidation failure) and returned tickets in Jira with reproduction PoCs.
- Renewed an application certificate and created a CA certificate, managing certificate lifecycle requirements alongside Azure DevOps pipeline and Agile delivery work.

Product Development Intern - Epicor Software, Bengaluru Oct 2025 - Sep 2026

- Engineered a PowerShell cleanup script deployed across 5 agent VMs via a weekly automated ADO pipeline, clearing ~50 GB of logs and temp data per run and eliminating pipeline failures caused by storage exhaustion.
- Automated test environments with TypeScript UI automation and Python/Locust load-testing scripts that drove enterprise application workflows across parallel Chrome instances under concurrent load.

Security Consultant (Freelancer) - Mindpex July - Aug 2026

- Exploited direct prompt injection on an unauthenticated FastAPI LLM endpoint that passed raw input to the model, and demonstrated indirect prompt injection via persistent employee-memory poisoning that shaped future LLM outputs.
- Identified AI trust-boundary failures: an LLM context store with zero tenant isolation, an unvalidated context field with no provenance checks, and raw LLM exceptions leaking infrastructure details; delivered remediation.
- Assessed the multi-tenant SaaS platform across 7 security domains using OWASP WSTG; documented 30+ CVSS-scored findings (14 Critical, 17 High), incl. SSRF confirmed OOB via interactsh, with code-level fixes in TypeScript, Python, and SQL.

Projects

VigiLynx - Winner, HackAthena'25 Cybersecurity Track (Live Web App | Github) Apr - June 2025

- Engineered a working phishing-detection prototype in 48 hours: a Random Forest classifier on extracted URL features, analyzing 1,000+ URLs and raising real-time alerts through a Chrome extension.
- Integrated VirusTotal threat-intelligence APIs to automate multi-engine malware verdict parsing across 50+ scanned files, enriching ML detections with external intelligence.
- Developed authenticated backend services and a monitoring dashboard logging detections, scan history, and per-user security events for threat visibility.

Black-Box Web Pentest - Powerdialer (Github Repository) Jun 2026

- Performed an authorized OWASP WSTG-based assessment validating authentication, authorization, API, and WebSocket controls using Burp Suite, ffuf, and Gobuster.
- Identified and manually validated
