Services

- LLM-powered applications and API integrations, from prototype to deployment.
- AI agents, scheduled pipelines and workflow automation, with security review (prompt injection, data isolation) built in before launch.

Projects

cron-engine - Automated Candidate-Matching Pipeline (Github) Sep 2026 - Present

- Architected an automated candidate-matching engine using Groqs to screen unstructured job descriptions on a scheduled cron run.
- Applied batch prompt engineering to classify multiple job descriptions per request, with strict JSON schema enforcement so every response is machine-parseable.
- Set model temperature to zero for consistent experience-level classification across runs.
- Engineered a fault-tolerant multi-model fallback chain across open-source models, so a failing or rate-limited model hands off to the next instead of stopping the run.
- Implemented automated HTTP 429 retry with backoff to handle API rate limits without manual intervention.
- Added hybrid rule-based pre-filtering ahead of the LLM, cutting redundant API token consumption and keeping scheduled runs reliable.

Career Engine - LLM Resume Generation System July 2026 - Present

- Architected an end-to-end LLM application, designed to run on Claude models, that generates role-tailored, ATS-optimized technical resumes from raw job descriptions.
- Built structured context injection across 7 specialized knowledge-base modules, so each resume is grounded in verified candidate data rather than model guesswork.
- Implemented an 8-stage agentic generation pipeline that runs end to end without manual intervention.
- Enforced strict Truth Guard anti-hallucination constraints to stop the model from fabricating metrics or experience.

VigiLynx - Winner, HackAthena'25 (Live Web App | Github) Apr - June 2025

- Built and deployed an ML-driven phishing and malware detection platform (Chrome extension, web app, Node.js backend) that won the HackAthena'25 Cybersecurity Track.
- Implemented a Random Forest URL-classification pipeline with feature extraction, analyzing 1,000+ URLs and generating real-time browser alerts.
- Integrated the VirusTotal API to automate malware verdicts across 50+ files, with an authenticated dashboard logging detections and scan history.

Experience

Security Consultant (Freelancer) - Mindpex July - Aug 2026

- Security-tested the AI/LLM layer of a multi-tenant SaaS platform, exploiting direct prompt injection on an unauthenticated LLM endpoint and indirect injection via persistent memory poisoning.
- Found an LLM context store with no tenant isolation and raw LLM errors leaking infrastructure details; delivered code-level remediation.
- Assessed the full platform across 7 security domains, documenting 30+ CVSS-scored findings (14 Critical, 17 High) with a prioritized remediation roadmap.

Associate Product Developer - Epicor Software, Bengaluru Sep 2026 - Present

- Re-tested 5 penetration testing defects with Burp Suite and manual API requests, uncovering 3 incomplete fixes (CSP unsafe-inline bypass, BOLA user-data exposure, JWT post-logout invalidation failure).

Product Development Intern - Epicor Software, Bengaluru Oct 2025 - Sep 2026

- Engineered a PowerShell cleanup script deployed across 5 agent VMs via a weekly ADO pipeline, clearing ~50 GB of logs and temp data per run and eliminating pipeline failures from storage exhaustion.
- Developed TypeScript UI automation and Python/Locust load-testing scripts running parallel Chrome instances against an enterprise application.

Skills

- **AI & Automation:** LLM API Integration, Prompt Engineering, Structured JSON Output, Multi-Model Fallback, Rate-Limit Handling, AI Agents and Pipelines, Anti-Hallucination Design, Machine Learning (Random Forest), Prompt Injection Testing
- **Programming:** Python, JavaScript, TypeScript, Node.js, React, PowerShell, Bash, SQL
- **Platforms & Tools:** Groq, Claude, Supabase, Chrome Extension APIs, VirusTotal API, Headless Chromium, Azure DevOps, Git, Jira
- **Security:** OWASP LLM Top 10, API Security, Authentication, Authorization, Burp Suite, Semgrep

Certifications and Achievements

- CompTIA Security+ (SY0-701) - June 2026
- ISC2 Certified in Cybersecurity (CC) - Feb 2026
- Winner - HackAthena'25 Cybersecurity Track (National Hackathon)
- Solved 200+ CTF Challenges | Top 10% Ranking on TryHackMe
